EXPERIENCE

Freelance Software Engineer
Self-Employed

Dec. 2025 – Present
Kuopio, Finland

- Engineered full-stack applications for international clients, delivering high-performance Go and Node.js backends with 100% on-time milestone completion.
- Optimized backend infrastructures and database indexing, achieving a 50% reduction in API latency and ensuring 99.9% uptime for production-ready full-stack applications.
- Developed and deployed production-ready full-stack web and mobile, supporting 10k+ potential monthly active users.

Staff Full Stack Developer
Phonia (Promoted from Intern after 3 months)

Feb. 2024 – Aug. 2025
Montreal, CA

- Engineered a audio conversion module with <200ms latency, improving data integrity and speed by 30% for our customAI model.
- Architected backend logic to process 60k+ recordings, establishing a scalable data pipeline for custom AI model training sets.
- Delivered high-quality feature delivery that secured 2 public innovation grants and 4 industry awards.
- Architected a robust internationalization (i18n) framework, enabling seamless multi-language support and facilitating expansion across the broader Canadian market.

TECHNICAL SKILLS

Languages	Java, Python, Go, Dart, JavaScript, TypeScript, C#, Rust, SQL, NoSQL
Frameworks	React, Next.js, Node.js, Bun, Flutter, .NET, SolidJS, Svelte, Tailwind CSS
Systems & Dev	Linux, Docker, Nix, CI/CD, Git, Supabase, MongoDB, Agile (Scrum/Jira)
Specialized	Godot (GDScript), MonoGame, Three.js, LaTeX, Technical Documentation

EDUCATION

University of Eastern Finland
Bachelor of Science in Computer Science
Courses: Distributed and Concurrent Systems, Software Engineering, Data Structures & Algorithms.

Kuopio, Finland
Sep. 2025 – Present

Collège de Maisonneuve
College Diploma (D.E.C.) in Software Development
Courses: Native Mobile Development, Advanced Web Applications, Offensive Security.

Montreal, QC
Aug. 2022 – May 2025

PROJECTS

GymBud | Flutter, Supabase, OpenAI

Nov. 2024

- Architected an AI-driven fitness MVP utilizing OpenAI for real-time, context-aware workout generation.
 - Engineered a high-fidelity gamified progression system with custom UI components in Flutter.
- Award: 3rd Place Overall & Best Design (800 CAD Prize) — 24-hour winner.**

HomeBrewer | React, Three.js, Supabase

Feb. 2025

- Built a high-performance 3D editor with GLTF instancing to maintain a stable 60 FPS during mesh editing.
- Developed a custom streaming pipeline to achieve sub-1-second loading times for large-scale 3D miniatures.

Kira | Godot, GDScript

Feb. 2025

- Developed a 2D exploration game featuring a custom modular system to manage 300+ concurrent game objects efficiently.
- Reduced CPU overhead by 20% through optimized physics layers and custom navigation mesh logic.
